
Columnar Norway Spruce

Picea abies 'Cupressina'

Sun 20-30' tall 4-6' across

The narrow fastigiate form of Norway Spruce is in high demand for urban and boundary plantings where strong vertical accents are required. This selection grows quite quickly.

Weeping White Spruce

Picea glauca 'Pendula'

Sun 30-40' tall 6-8' across

A strong central leader and blue-green foliage on highly pendulous limbs are distinctive characteristics of this evergreen tree. Adds vertical interest to landscapes or can be used as a focal point.

Brun's Serbian Spruce

Picea omorika 'Brun's'

Sun 20-30' tall 8-10' across

Strongly upright branches of this spruce reveal white stomata on the undersides of the needles giving the tree a silver cast. Its upright form & graceful branches create a striking silver-blue habit.

Brun's Weeping Serbian Spruce

Picea omorika 'Pendula Brun's'

Sun 20-30' tall 4-6' across

Pyramidal form and silvery blue needles on horizontal branches. Outstanding color and slow growth. Good for locations with limited space.

Fastigiata Blue Spruce

Picea pungens glauca 'Fastigiata'

Sun 12-15' tall 2-3' across

An interesting tree with a tight columnar habit and attractive blue color. Since it will not grow as tall as the species, nor as wide, it is the perfect choice for planting in a smaller area.

The Blues Blue Weeping Spruce

Picea pungens pendula 'The Blues'

Sun 5-6' tall 3-4' across

Slow growing conifer with weeping branches, spreading in many directions. Bright, silvery-blue foliage. A great accent or specimen. This weeping spruce holds upright leader.
